**FVL**

# Sturdy. Safe. Flexible

## The Felder Vertical Rack System FVL

Solid wood

Panel material

Plastic

Non-ferrous metals

**FVL**

- » Cost-effective modular design, can be extended as needed
- » Safe and space-saving storage consisting of 27 panels (19 mm) per compartment
- » Rack height compatible with panel tilting device for FAT 300 S / 500 S
- » Custom design, base panels and sides are made according to customer specifications
- » Flexible solutions for organisation and safety

The Felder vertical rack system ensures safe, space-saving and secure storage for all types of board materials.

Thanks to the modular design of the robust galvanized steel frame construction, the Felder vertical rack system can be extended in all directions to meet individual requirements.

### Choosing Felder – a risk-free decision

- » Cost-effective modular design, can be extended as needed
- » Safe and space-saving storage of for example 27 pcs. 19 mm chipboard or decorative chipboard per storage unit
- » Easy loading and unloading of panel materials thanks to sturdy steel rollers at the bottom of the compartment on the open side
- » One-person operation: panel material rack height compatible with Felder worktable FAT 300 S/500 S panel tilting device
- » Comes with assembly instructions

# The most important highlights at a glance

**The Felder vertical rack system: a good basis**  
 The basic frame of the Felder vertical rack system consists of two compartments that allow 27 pieces of 19 mm panels to be stored in each compartment. Panels with a max. outer dimension of 3000 x 2150 mm can be stored in this system.

**Modular design, can be expanded as required**  
 Due to the symmetrical structure of the individual storage units, the vertical rack can be extended on both sides by 1000 mm, each offering an additional storage space of 27, 19 mm panels. The storage system can also be extended in length in increments of 1000 mm.

**Storage extension for laminate board materials**  
 The FVL can be fitted with a storage extension for laminate board materials. The current mounting system, which consists of a supporting lower section and an upper connecting part, is mounted on the side. It enables the storage of various materials that are thinner and have larger surfaces.

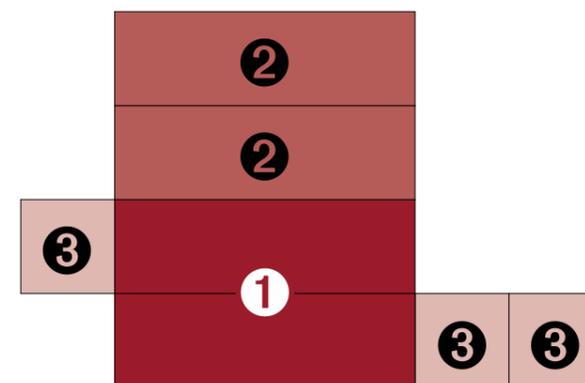

**Flexibly create storage space for profile strips and bar stock**  
 An additional option is to fit cantilever arms to the sides of the cells. These cantilever arms form an open shelf on the outer side of the compartment and thus provide the option to optimally store narrow off cuts, profiles or strips.

## Details

**Work safely without heavy lifting**

Solid steel rollers on the infed side enable the simple loading and removal of the panel materials. The roller height is compatible with the panel tilting device for the FAT 300 S and FAT 500 S worktables and, as such, makes the safe storage of panel material possible, even when working alone.

Components shown in wood look not included in the scope of delivery.
