## **K2S**

The compact sliding table saw offers everything for the ambitious DIY enthusiast and craftsman

The compact K2S sliding table saw offers everything for the ambitious DIY enthusiast and craftsman in the smallest of spaces.

- » Sliding table with torsion-resistant chamber profile
- » Cutting length: 1250 mm
- » Rip capacity: 610 - 1220 mm
- » Cutting height: 80 mm
- » Easy saw blade change
- » Compact design
- » Extensive range of accessories

# Hammer®

## The most important highlights at a glance

### Sliding table

The aluminium sliding table ensures precision from the very first cut. Guaranteed hammer stability and precision: the heavily ribbed, milled and anodised aluminium hollow chamber profile of the sliding table, combined with the high-quality guide system, ensures absolutely play-free running!

### Saw blade tiltable from 0° to 45°

The continuously variable tilt range between 0° and 45° ensures precise mitre cuts. End stops at the 0° and 45° position ensure exact positioning of the settings. A large scale allows precise positioning and easy read-out of the corresponding values. Both the height adjustment and the angle adjustment can be done directly from the operator's side. The scope of delivery includes 1 handwheel.

### Outrigger and crosscut fence

The outrigger table provides additional surface support and precision when processing large dimensioned and heavy workpieces. In combination with the aluminium crosscut fence 1300, your Hammer with outrigger table becomes a complete, large panel saw.

## Details that convince

### Saw aggregate

The Hammer saw aggregate impresses with smoothness, precision and extreme user friendliness. The large cutting height of 80 mm leaves nothing to be desired. Saw blades with up to 254 mm diameter can be lowered completely below the level of the saw table. The saw blade is simple to access and can be changed with ease.

### Grooving, slot and tenoning with the saw

The Hammer panel saw is configured at the factory for the use of special adjustable dado tools. The dado tool can be fitted to the saw arbour and makes it possible to make various width grooves, tenons and slots of between 8 and 19.5 mm in width.

### Hammer - Decision making reliability for many years to come

Stability, functionality and reliability – Hammer woodworking machines are premium products from Felder.

Since 1997, Hammer has been producing high-quality yet affordable woodworking machines for trade and industry. The models specifically designed for this target group provide cost-effective solutions for a wide range of requirements.

Decades of engineering experience, strict quality standards and proven Felder system solutions guarantee outstanding woodworking machines that deliver excellent results and long-term satisfaction.

From passionate woodworkers to demanding professional users, everyone can find a reliable machine for precise woodworking with Hammer.

### ... why you should decide on a Hammer machine now:

- » Excellent value for money
- » Decision making reliability for many years to come
- » State of the art machine technology
- » Solid cast iron tables and units
- » High quality, unique detail solutions as part of the standard package
- » Top quality manufacturing with strict quality guidelines
- » User friendly
- » Classic design
- » Quality and precision from AUSTRIA
- » Compact functionality
- » Mobile as an option
- » Minimal space requirement
- » Quickest changeover times

### Rip fence

The cutting width on the saw table can be adjusted continuously between 0 and 610 mm (optionally 0-1220 mm). Thanks to the integrated scale in the guide rail, the aluminium fence can be precisely set to the desired position. When carrying out angled cuts with a tilted saw blade it is possible to move the fence from the horizontal to the flat position. The narrow fence edge then enables the rip cutting of very thin workpieces.

## Product range

# Hammer®

## Hammer Affordable functionality and reliability

Since 1997 the Felder Group has been producing high quality yet affordable woodworking machines with the Hammer brand for do-it-yourselfers and small businesses. Robust, durable, space-saving and precise in its operation. Quality products that simply make woodworking fun.
